

GLOBAL IP SERVICES

COMPREHENSIVE E-BUSINESS SOLUTIONS WORLDWIDE

Consider Sprint your essential business ally as you expand your e-business initiatives globally. Sprint can help you put all the pieces together to create a total integrated IP solution — one that can give your business a significant edge in the new Internet economy.

Sprint Global IP Services can make it possible to:

- ▶ Extend your reach through global network access
- ▶ Protect your valuable data assets
- ▶ Provide secure wide-area networking worldwide
- ▶ Leverage Sprint international expertise

GLOBAL IP SERVICES

HARNESSING THE POWER OF THE GLOBAL INTERNET

The Internet has forever changed the way business does business — globally. Today's companies, large and small, rely on IP connections for secure wide-area networking with affiliates, customers and suppliers around the world. International voice over IP traffic is growing exponentially. Innovative collaborative tools are reducing the need for overseas travel. And the world's marketplace is increasingly becoming an electronic marketplace, open for business in every time zone.

Sprint can provide support for your global e-business initiatives with end-to-end Internet transport, hosting, security, consulting and managed services — all from a single source. With a highly reliable Tier 1 global Internet backbone, competitive service level agreements (SLAs) and over 800 technology consultants, Sprint can bring proven experience, service and support to your IP solutions.

Features

Global dedicated Internet access

Choose from a wide range of speeds, from 56/64 Kbps to 155 Mbps, in 35 countries. Our industry-leading global IP network creates a direct Internet connection from your business to the nearest Sprint node for one-hop access to the majority of the world's Internet content. And Sprint gives you something more — the ability to integrate access with other Sprint services on the same private line — at a cost savings to you. You'll have the confidence of knowing that your service is backed by a 99.9% SLA for availability virtually everywhere in the world. What's more, you'll be covered by aggressive SLAs for latency and packet loss.

Global dial Internet access

Provide secure remote access to your corporate LAN for mobile employees and small offices. Sprint puts you in touch through one of the most wide-reaching dial networks in the world. It's only a local call away in over

1,800 cities in 147 countries. And Sprint Internet Dialer software allows users to utilize the same ID and password worldwide, making Sprint Global Dial Internet Access exceptionally easy to use.

Global IP VPN

Leverage the anytime, anywhere capability of the Internet with the reliability, performance and security of a private network. At the core of our IP VPN solutions is an extensive portfolio of products and services that can enable secure communications with geographically dispersed employees, customers, partners and suppliers. Sprint can provide network design, installation, configuration, management and maintenance in over 70 countries — with more to come.

Global security services

Customize a security solution from our comprehensive portfolio, including firewalls, antivirus protection and token-based authentication, as well as Sprint-managed and customer-managed options. With Sprint you get the expertise and the latest in security technology, all designed to help you conduct e-business with confidence. Whether you or

Sprint manages your security solution, you can rely on our IP Security Operations Center for around-the-clock service and support.

Business advantages

Sprint has been in the business of designing and managing advanced global data networks for over a decade. And that adds up to some very important advantages for your company.

- ▶ You can expect exceptional support from our knowledgeable account teams on a regional and global basis
- ▶ You can benefit from around-the-clock, around-the-globe service management
- ▶ You'll only need to deal with one company — Sprint — for service implementation
- ▶ You can obtain all the building blocks for your global IP initiative — from transport to equipment and expert consultation — from a single source
