

Sprint EthernetSM Services

Voice/Data

Accelerate metro area data connections by a factor of 10

Today's Ethernet LANs run at 5, 10, 100, 500, even 1,000 megabits per second. And Sprint believes there's no reason to put on the brakes when it comes to making LAN-to-LAN connections across the metropolitan area.

That's why Sprint has raised the speed level on its metropolitan area network (MAN) to support gigabit Ethernet.

With such large amounts of bandwidth at your command — at very affordable rates — you can now say “yes” to implementing all those data-intensive applications that can make your business run more effectively.

* Specific speeds vary by market.

Highlights

With Sprint EthernetSM Services, you can:

- Choose scalable service levels of 5, 10, 100, 500 or 1,000 Mbps*
- Support new bandwidth-intensive applications
- Simplify network administration by using the same access method for both LAN and MAN connections
- Reduce metro area networking costs by leveraging existing infrastructure

Business advantages

Economical. For organizations that need large amounts of bandwidth for applications that do not require quality of service, Sprint Ethernet Services are exceptionally cost effective. You can leverage the investments Sprint has already made in public network infrastructure and technical personnel.

Scalable. You can increase the number of users and the number of locations with the flip of a switch and minimal additional costs.

Simple. Your IT staff will find Sprint Ethernet Services easy to support because they employ the same familiar technology as Ethernet LANs.

Fast. Sprint Ethernet Services put an end to frustrating bottlenecks at peak periods — and that means greater productivity for your employees.

Features

Sprint Ethernet Services provide a simple, cost-effective solution to private network interconnectivity for businesses with multiple locations in the metro area. Features include:

- Three service levels — 10-Base T (Ethernet), 100-Base T (fast Ethernet) and 1000-Base T (gigabit Ethernet)
- Point-to-point or any-to-any data connectivity or a mixture of both
- Multiple, seamless virtual connections via a single access line
- Optional Sprint Managed NetworkSM Services to free up your staff for other priorities

Applications

The affordability of Sprint Ethernet Services makes it easier to cost justify high-bandwidth applications such as:

- High-speed Internet access and virtual private networks
- Storage area network disaster recovery
- Teleradiology and telemedicine
- Video, multimedia conferencing and distance learning
- Internetworking with existing WAN connections
- A single physical backbone with the flexibility to support data, Internet protocol, video and multicast applications

Why Sprint?

With a rich heritage more than a century strong, Sprint remains one of the most financially stable companies in the telecom industry. When you choose Sprint, you're choosing a global company that wins industry and customer accolades for service reliability and customer satisfaction and one that is committed to developing solutions that can transform the way you get business done.
