

## Sprint Message Archive

**A managed service that helps your organization comply with regulatory mandates for message retention**

Sprint Message Archive provides complete, secure and compliant e-mail and instant message archiving, delivered with the advantages and simplicity of a managed service. Sprint Message Archive collects electronic communication, archiving and indexing it for immediate monitoring, search and retrieval. The service is provided in order to enable compliance with regulatory requirements, such as SEC Rule 17 a-4, NASD Rule 3010, the Health Insurance Portability and Accountability Act, and the Sarbanes-Oxley Act, and provides all of the appropriate filtering and monitoring of electronic communications needed for full compliance.

### **Web-based e-mail backup for business continuity**

Additionally, Sprint Message Archive provides organizations with a proven and reliable solution for uninterrupted e-mail continuity for every employee. In the event an organization's primary e-mail system fails, Sprint Message Archive offers a fully functional, Web-based e-mail system that continues to accept inbound e-mail and provides the ability to reply, forward and create new e-mail until the primary system is restored. Sprint Message Archive allows any business to have a complete transaction record of activity on its e-mail system and the ability to use it for business information, legal discovery, dispute resolution, customer information and regulatory compli-

ance. From individual employees to human resources, legal compliance and management, Sprint Message Archive enables all users to leverage the valuable information contained in an organization's electronic communications system.

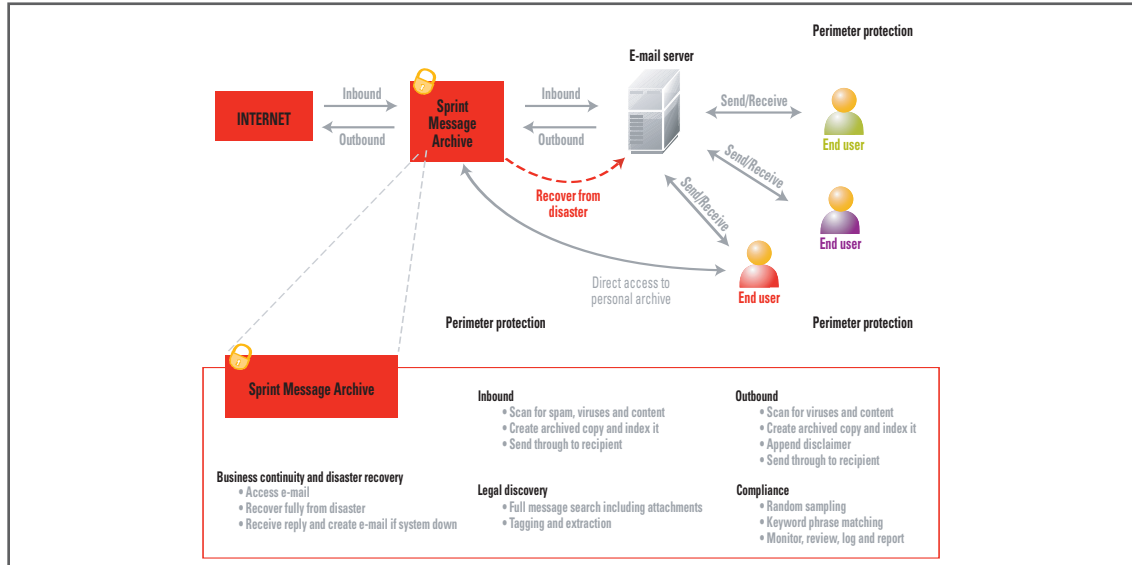

When Sprint Message Archive is used in conjunction with Sprint Email Protection<sup>SM</sup> Services for filtering spam, viruses, and unwanted content from the message stream, organizations have a complete solution for managing and protecting their mission-critical electronic messaging infrastructure.

Sprint Message Archive is a complete managed service without complex hardware and software to purchase, configure and maintain. Only a Web browser is needed to securely access the complete repository of your organization's electronic communications.

### **SLA for 99.999 percent availability**

Sprint Message Archive leverages the benefits of the Sprint network, a globally distributed, fully load-balanced data center network that is secure, managed, active, resilient and trusted. The Sprint network is the only message management and e-mail security network to deliver 100 percent historical uptime, accompanied by a 99.999 percent availability service level guarantee. Combined with support for transport layer security, Sprint Message Archive

### Key features and functions

Sprint Message Archive enables organizations to comply with regulatory mandates for message retention while ensuring uninterrupted e-mail.

delivers flexible and effective e-mail archiving, so that messages are not tampered with or lost during transit or archival storage.

### Why Sprint?

As a global service provider with more than a century of experience, Sprint has the financial resources required to maintain high service levels. What's more, Sprint is the company best positioned to offer a total networking solution — one that integrates wireline and wireless services — so your employees can be connected seamlessly and securely, virtually anywhere their jobs take them. With a single point of contact for multiple solutions, you'll find Sprint exceptionally easy to do business with and a company you can count on for responsive customer service and

uncompromising network reliability. It's no wonder that more than 95 percent of the Fortune 500 use Sprint for data, Internet, voice or wireless solutions.
